Using Table Tag

Write HTML code for the following box using table tag.

Climate Change Indicators over Decades

The following table provides an overview of various climate indicators, including global temperature anomalies, carbon dioxide (CO₂) levels, and sea level rise, across different decades. This data helps in understanding the long-term trends and impacts of climate change.

Climate Indicators (1880s - 2020s)						
Decade	Global Temperature Anomaly (°C)			CO ₂ Levels (ppm)	Sea Level Rise (mm)	
	Average	Max	Min		Average	Max
1880s	-0.10	-0.05	-0.15	290	0	2
1900s	-0.05	0.00	-0.10	295	2	4
1950s	0.05	0.10	0.00	315	4	8
1970s	0.10	0.15	0.05	330	6	12
1990s	0.30	0.35	0.25	355	10	20
2000s	0.40	0.45	0.35	380	15	25
2010s	0.50	0.55	0.45	410	20	30

The data presented in the table illustrates significant trends in global temperature anomalies, rising CO₂ levels, and increasing sea levels. These indicators reflect the ongoing impacts of climate change, emphasizing the importance of continued monitoring and action to address these challenges.
