Self-Made Assignment - MS Power Point

Adding Transition to a Slide in Power Point

Make presentation using various transition.

Slide 1: Title Slide

- Title: The Impact of Climate Change on Our Planet
- Subtitle: Understanding Our Changing World
- Your Name
- Date
- Transition: Fade

Slide 2: What is Climate Change?

- Definition: Climate change means big changes in the Earth's weather over a long time. This includes changes in temperature, rain, and wind.
- Key Point: Most climate change is caused by human activities, like burning fossil fuels (coal, oil, and gas) for energy. This releases gases into the air that trap heat.
- Transition: Wipe (from left)

Slide 3: Causes of Climate Change

- Main Causes:
 - Greenhouse Gas Emissions: When we drive cars or use electricity, we create carbon dioxide (CO₂). This gas stays in the air and makes the Earth warmer.
 - Deforestation: Cutting down trees takes away a natural way to clean the air. Trees use CO₂ and give us oxygen.
 - Industrial Processes: Factories produce many products, but they also release harmful gases into the atmosphere.
- Transition: Push (from right)

Slide 4: Effects on Weather Patterns

- Key Effects:
 - More Extreme Weather: Climate change leads to stronger storms, more floods, and longer droughts (when it doesn't rain for a long time).

Self-Made Assignment - MS Power Point

Adding Transition to a Slide in Power Point

- Temperature Rise: The Earth is getting hotter. This affects how we live, grow food, and stay safe.
- Changes in Rainfall: Some places get too much rain, while others get too little, causing problems for farmers and people.
- Transition: Zoom

Slide 5: Impact on Ecosystems

- Ecosystems Affected:
 - Coral Reefs: Warmer oceans cause coral reefs to bleach, which harms fish and other marine life.
 - Wildlife: Animals have to move to find food and better living conditions. Some may not survive if they can't adapt.
 - Habitat Loss: As the climate changes, natural homes for plants and animals can disappear, leading to loss of species.
- Transition: Split (horizontal)

Slide 6: Human Consequences

- Key Points:
 - Food Security: Changing weather affects how much food we can grow. This can lead to hunger in many areas.
 - Health Risks: Hotter temperatures can cause heat-related illnesses, and some diseases can spread more easily.
 - Economic Impact: Natural disasters can damage homes and businesses, costing a lot of money to repair.
- Transition: Cover (from bottom)
