Self-Made Assignment -Control Structures in C

Type Casting in C Language

Write a C program to demonstrate **implicit type casting** where the system automatically converts a smaller data type to a larger one.

1. Take an integer input from the user and store it in a variable.
2. Assign that integer value to a float variable.
3. Display both the integer and float values to show the type conversion.

**Sample Output:**

Integer value: 10

Float value after implicit type casting: 10.00
