Self-Made Assignment - Visual Basic

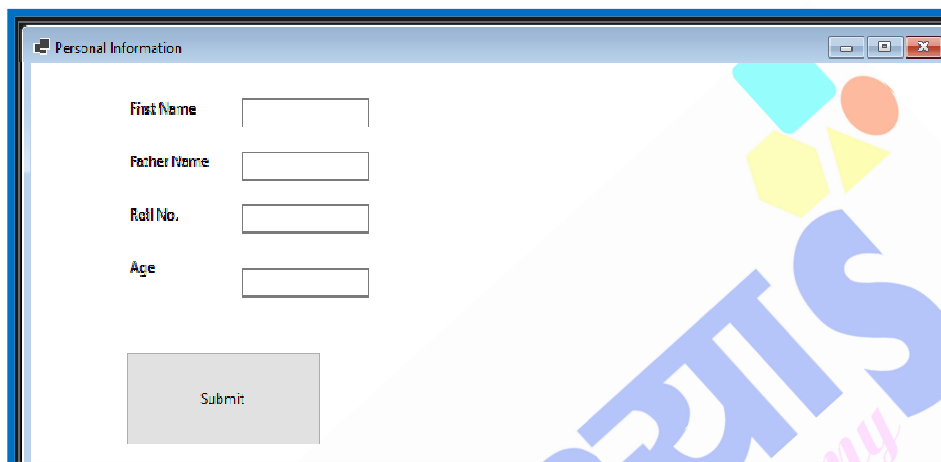

Constants and Variables

Personal Information

Create a form that collects and displays personal information.

Form Design:

- o Add TextBox controls for first name, father name, roll no, age.
- o Add a Button labeled "Submit".
- o Declare variables to store the first name, father name, roll no. and age.
- o Assign the values from the TextBox controls to these variables.
- o Display the full name and age in the Label when the button is clicked.

The screenshot shows a Windows-style window titled "Personal Information". Inside the window, there are four text boxes with labels: "First Name", "Father Name", "Roll No.", and "Age". Below these text boxes is a single button labeled "Submit". The window has standard Windows window controls (minimize, maximize, close) in the top right corner.
