## Self-Made Assignment - Java Script

### Popup Boxes in Javascript

Write a JavaScript Code that demonstrates the use of popup boxes (alert, prompt, and confirm). The program should:

- Display a welcome message using an alert.
- Ask the user for their name using a prompt and store it in a variable.
- Ask the user to confirm if they want to continue using a confirm box.
- Display the result in the document.write.

The screenshot shows four sequential browser dialog boxes:

- Alert:** A message box with the text "Welcome to our website!" and an "OK" button.
- Prompt:** A message box with the text "What is your name?" and a text input field containing "karan". Below the input field is a checkbox labeled "Prevent this page from creating additional dialogs".
- Confirm:** A message box with the text "Do you want to continue, karan?" and a checkbox labeled "Don't allow this site to prompt you again".
- Document Write:** A message box with the text "Hello, Karan! Thanks for continuing."

#### Instruction:-

You have to write code according to this (previous explanation), and all 4 popup boxes should appear when the code is run in the browser. At the end, whatever we enter in the popup boxes should be shown as output.
