Self Made Assignment - Java Script

Introduction to Events and Event Handling

Ques 1- Write a JavaScript Code Form with onsubmit Event

Instructions:

1. Create a simple HTML form.
2. Attach an onsubmit event using JavaScript.
3. Prevent the default form submission behavior.
4. Validate the input fields.
5. Show a success message if all fields are filled.

Output

Registration Form

Username:

Email:

Ques 2- Write a JavaScript program that changes the background color of the web page every time a button is clicked. Use event handling to achieve this.

Instructions

- Create HTML Elements:
- A <button> element with text like “Change Background”.
- Use a <script> tag to write JavaScript.
- Access Elements in JavaScript:
- Use document.getElementById() to get the button element.
- Attach an Event Listener:
- Use .addEventListener(“click”, function) to run a function when the button is clicked.
- Change Background Color:
- Inside the function, use document.body.style.backgroundColor = “newColor”;
- You can use a random color or cycle through a list of colors.
