&  
Test Series

Self Made Assignment - Java Script

Screen Object in JavaScript

Ques 1- Write a JavaScript code that displays detailed information about the user's screen using the screen object and the document.write() method.

Your program should display the following on a web page:

- Total screen width in pixels
- Total screen height in pixels
- Available screen width (excluding OS taskbars/docks)
- Available screen height
- Screen color depth (in bits)
- Screen pixel depth (in bits)

Requirements:

- Use document.write() to output the information directly to the web page.
- Each property should be displayed on a separate line using <br>.
- Add appropriate labels so the output is understandable.
- Wrap your code inside proper HTML structure using <!DOCTYPE html>, <html>, <head>, <body>, and <script> tags.

Output

**Device Screen Information**

Screen Width: 1366px  
Screen Height: 768px  
Available Width: 1366px  
Available Height: 728px  
Color Depth: 24 bits  
Pixel Depth: 24 bits
