Self-Made Assignment - Java Script

Introduction & Structure of the DOM

Ques 1- Create a simple HTML page.

- Inside the <body>, do the following:
- Add a <button> element with the label "Click Me!".
- Give the button an id (e.g., id="myButton").
- In a <script> tag (or external JS file), write JavaScript code to:
- Select the button using document.getElementById.
- Add an event listener to the button using .addEventListener().
- Inside the event listener function, display an alert box with the message: "Button was clicked!".

Output
