Ques1- Write a Python program to print numbers from 1 to 30, but skip all numbers that are multiples of 5 using the continue statement.

Ques 2-Write a Python program that continuously asks the user to enter a number.

- If the entered number is positive, the program should display its square.
- If the entered number is negative, the program should display the message "Negative number entered. Loop stopped." and terminate the loop using the break statement.
