Self Made Assignment - Python

Overview of Object Oriented Programming in Python

Ques: 1 Create a Python program using Object-Oriented Programming to store and display student details.

Instruction (step by step)

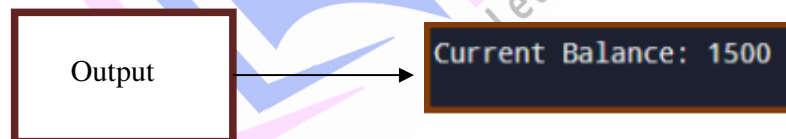

- Create a class named Student
- The class should have:
- A method to take student name and marks from the user.
- A method to display the entered data.
- Create an object of the class.
- Call both methods using the object.

Ques: 2 Create a bank account program using a constructor to store the initial balance and allow deposits.

Instruction (step by step)

- Create a class named Bank.
- Use `__init__()` to store the balance.
- Create a method to deposit money.
- Create a method to display balance.
- Create an object and perform deposit.
