Self Made Assignment - DHTML

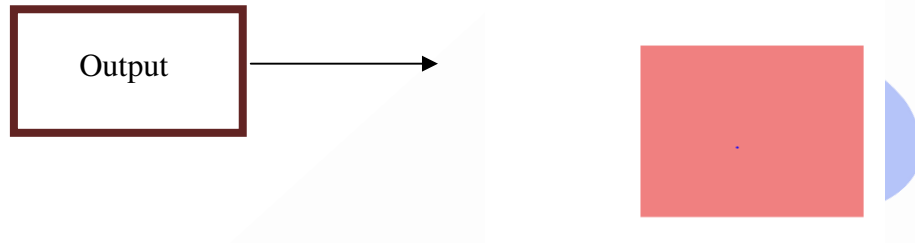

2D & 3D Transforms in CSS

Ques: 1 Write a CSS program to Create a box and move it from its original position using CSS translate().

Instruction (step by step)

- Create an HTML file.
- Create a div box.
- Apply width, height, and background color.
- Use transform: translate() to move the box right and down.

2D Translate Example

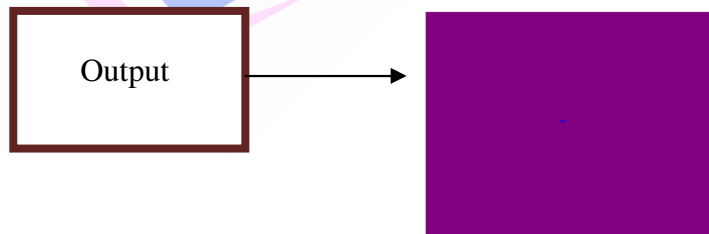

Ques: 2 Write a CSS program to Create a box that rotates in 3D when mouse hovers using rotateY().

Instruction (step by step)

- Create a div inside a container.
- Add perspective to the container.
- Use transition for smooth effect.
- Rotate the box on hover.

3D Rotate on Hover
