Question what is Input unit? Explain any three input devices.

Ans

Input devices → Input devices are the components of the computer system that accepts incoming data and instructions and converts them into a pattern of electronics signals in a binary code that is understandable to a digital computer.

For example:- Keyboard, Mouse, Joysticks etc.

(1) Keyboard :- The keyboard is an input device that allows you to enter letters, numbers and symbols into your computer.

(2) Mouse :- A mouse is a small hardware input device used by hand. It controls the movement of the cursor on the computer screen and allows users to move and select folders, text files and icons on a computer.

(3) Joystick :- It is used to computer documents to set in the computer system with the help of input devices. It help to work with the computer components.
