Q1

Ans = The computer memory is one of the most important elements in a computer system.

Q2

Ans = It also relates to many devices that are responsible for storing data on a temporary or a permanent memory. The function of memory has two types

- ① Secondary memory
- ② primary memory.

Q3

Ans = Primary memory is a section of computer memory that the CPU can access directly. Primary memory has a faster access time than secondary memory and is faster than cache memory.

Q4

Ans = A control unit or CU is circuitry that directs operations within a computer's processor. It lets the computer's logic unit memory and both input and output drive know.

Q5 Ans = By default a complete interaction cycle starts from a component and includes the following step cycle.
