

Name :- Ritu Rani
father name :- Mr. Balram.

Question:- Define Computer memory ?

Answer:- Memory:- In Computing memory is a device or system that is used to store information for immediate use in a computer or related computer hardware and digital electronic devices. The term memory is often synonymous with the term primary storage or main memory.

Question:- what is the basic the function of memory
Answer memory is the electronic holding place for the instruction and data a computer needs to reach quickly. It is where information is stored for immediate use in a computer or related computer hardware and digital electronic devices.

Question:- what are the functions of control unit ? Give any three.

Answer:- function of control unit:-

- 1) fetching instructions one by one from primary memory and gather required data and operands to perform these instructions.
- 2) Receiving and sending returns of operands of ALU to primary memory.

3.) Sending instructions to ALU to perform additions, multiplication etc.

Question! -4 Explain some characteristics of Primary memory?

Answer! -> The Primary memory of computer is also called main memory or primary memory.

- 1.) It is volatile memory.
- 2.) This memory is made of semiconductor technology.
- 3.) Data is automatically deleted in the event of power failure.
- 4.) This processing speed is faster than secondary memory.
