Ques 1 → Sequential access storage device is where data is either removed or entered in sequential order. Thus, all data is removed to after the data at place.

Direct access storage → The data can be entered easily without removing any data. But it can be easily customized without need to check all data.

Ques 2 → It is a non-volatile random access data storage device.

- It is cheaper.
- It is flexible to modify data.

Ques 3 → Secondary memory is permanent memory it need physical medium to store data e.g → CD, DVD, Hard Disk Drive. It has two types, sequential and Direct access storage.

Ques 4 → Fixed storage device is a storage device which stores data permanently and the data can not be erased or modify. for eg → DVD.

- Removable storage device are storage device which allow user to modify the data easily.

Ques 5.4

Primary Memory

- Volatile
- Expensive
- Rigid

Secondary Memory

- Non - Volatile
- Cheaper
- Simple
