Q1 Sequential access are useful when used for Backup and recovery, since it's important to do step through carefully. But it's a very slow Method.

Q2 Direct Access device allow quicker access to the exact item you wish to seek. Instead of a cassette think of DVD with the ability to select a particular scene.

Q3 HDDS have a longer lifespan. Having a higher read-write cycle is a clear advantage of HDDS as data is directly written on the platter disks. These platter disk have high durability and rarely deteriorate. Thus, they can last and function for a long time.

Q4 Secondary memory is known as a Backup Memory or Additional memory or Auxiliary Memory. Hard Drive, SSD, Flash, Optical Drive, USB Drive are some examples of secondary memory in computer.
