1) What is Computer?

Ans: - A computer is an Electronic Device that can store, find and arrange information, calculate amounts and control other machines.

2) Answer :- (i) Diligence :- Diligence is the Capacity of the computer of performing repetitive tasks without getting tired.

(ii) Versatility :- Versatility refers to the ability of computers to perform a variety of tasks; simple as well as complex.

3) Answer :- The British scientist Charles Babbage, the father of computers, thought too. Babbage wanted to build a machine that could perform accurate calculations quickly to avoid errors in navigation and engineering. This is when he came up with the design for the first computer called the Difference Engine in 1822.

4) Answer :- Three Characteristics of computer :-

(i) Speed : A computer works with much higher speed and accuracy compared to humans.

(ii) Accuracy: Computers perform calculations with 100% accuracy.

(iii) Memory: Computer stores many things in its storage and process the stored data to give output to the user.

Answer is id speed:- A computer works with much higher speed and accuracy compared to humans.

(ii) Versatility:- Versatility refers to the ability of computers to perform a variety of tasks; simple as well as complex.

(iii) Accuracy :- Computers perform calculations with 100% accuracy.

(iv) Memory :- Computer stores many things in its storage and process the stored data to give output to the user.

(v) Diligence :- Diligence is the capacity of the computer of performing repetitive tasks without getting tired.
