

A.1. (i) Dilligence → A Computer can work for many hour without create any errors. If millions of calculation are to be performed, a computer will perform every calculation with same accuracy.

(ii) Versatility → It means capability to perform complete works of different itypes. Computer is used every place. So it is called a multiasking device.

A.2. Three characteristics of computer :-

(i) Speed :- Computer do work for long times without creating an error. A computer is very fast device.

(ii) Storage :- Computer is a ~~an~~ high storage device. It stores data and program permanently. In computer we can stores a large amount of data

(iii) No feelings :- Computer has no feeling like humans beings. So, In the computer there is a lack of feelings.

A.3. Major difference b/w speed and accuracy.

~~Speed means performance of work~~

Accuracy  
Accuracy means is the very high.

1. Speed A Computer is very fast device.

2. It takes some few seconds to process the instruction.

3.

2. The accuracy level is determined on the basis of design of computer

A.4. Reasons:

(i) Computer is very useful :- Computer is very useful in our daily life. It used everywhere and play an important role in the lives of humans.

(ii) Fast and accurate device :- Humans can also mistakes in the calculation.

and they much take too long time. But computer is a very fast and accurate device. There is no any error in calculation performed by computer.

(iii) Universally Needs :- All Work like Bill paid, ~~at~~ <sup>the</sup> Money transferred by the computer.

### A.5 Functions of Computer

1. Input :- Input is the raw information entered into a computer. ~~It~~ <sup>It helps to</sup> ~~After the processing~~ <sup>declared the result.</sup>

2. Output :- Which provides input for the computer. It is called output device.

3. Processing :-  
4. Storage :-
