(Ans1) computer generation refers to the change in technology of computer. The improvement of Hardware and software and creating new technology to develop computer is basically computer technology. There are different generations:
~~each. ~~that~~~~

→ The first generation was invented in 1940-1956 by vacuum tubes.

(Ans3) Computer Generation :-

(A) 1940 — 1956 → Vacuum tubes.

-
- (i) it was for circuitry and magnetic drums.
 - (ii) used for calculation, storage, control purpose.
 - (iii) They were very large they needed whole room.

(B) 1956 — 63 → Transistors.

-
- (i) composed of semiconductor materials.
 - (ii) storage device is magnetic.
 - (iii) more reliable.
