

speed with same pace to millions of times. computer is a machine with no emotions and no IQ involved in it. So computer can give results to you on the basis of the command but every time you give command to computer computer give you same result with same accuracy to every time. It gives you result to hours to hours and never get tired to it.

NOTE => computer has no IQ because computer is a machine and it gives results on the basis of command and it has no personal I. Q. So it's a machine that can only run and give results on the basis of command and it can learn from this. computer has no its own intelligence and mind. it can learn and react and act according to the users give command to the computer. So it's machine that can learn from its past experience and give results according to the sets of instructions.
