Name:- Mdrit

Roll no:- 1507

1. Ans:- Artificial Intelligence.
Robotics.

2. Ans:- Applications of Computer:- Inside the Computer System. Run Many Software and we called it Application of And System software. A Computer has high speed of Calculation, diligence, accuracy, reliability which has made it an indispensible part for all Business organization.

(ii) Banking:- machine. Accounting periodicity which has include check, Current balance sheet, making deposits and overdrafts. 1- Tally, busy etc.

(iii) Education:- Computer helps to students for Education that will be enable to source of Education. and reduce the load of Books. Some Example of Education Application: Unacademy, Khan 247 etc.

3. Ans:- Laptop are general Purpose. CPU's are not considered to be embedded Computer.

(i) Firstly Embedded Computer are not those Computer which are Embedded

on consist in large mechanical or electronic device. So therefore, laptop and general purpose CPU's are computer itself.

(ii) Second reason is that Embedded Computers are designed to perform special purpose work such as digital watch, mobile washing machine, as laptop general purpose CPU's perform as the task of normal computer and calculation etc.

Ans:- Data- It is an a raw information which is processing to computer to get the meaningful results.

(iii) Information- It is an output given by the computer after processing the raw data given by the users.

(iii) Instructions- It is an commands given by the user as to the system to perform the given task to the program as per the task at same time and same purpose. that it called instructions.

(iv) Program: - It is a set of instructions given to the computer to perform various tasks at the same time.

Ans (i) Hardware: - Hardware is most important part of computer system that we can see and touch. It is called hardware without hardware computer system is incomplete.

(ii) Software: - Software is other important part in computer system. It runs inside the computer we cannot touch and see them. That way it is called software without software hardware is nothing.

(iii) Data: - It is a raw information which we put in computer system. It can store in storage device and after processing the data becomes information for user.

(iv) Program: - It is a set of instructions given to the computer to perform various tasks at the same time.
